

The Environment

by Alberto Galbiati and Lorenzo Leuzzi 1scA

Why the environment is important

The environment is fundamental for the life of all the living things.

The environment is important because without it this world is not the same.

But the most important thing is to create a beautiful world. Without the environment I think that the world would be so grey.

How can it be solved?

Therefore, we have only ten years to avoid the environmental disaster.

An agenda has been created: 2030 Agenda aims to eliminate all the big problems of the world, among which there is also the environmental issue.

What is happening in this period

In this period the environment is more and more in trouble for different problems caused by human beings.

According to the scientists only ten years remain to save the world.

The main things that are causing it are: factories, oil and plastic.

Goals

Goal 6: clean water and sanitation: Water is the most important thing which allows us to stay alive.

Goal 7: affordable and clean energy: Energy obtained from fossil fuels creates too much pollution.

Goal 14: Life below water: Oceans absorb 30% of the carbon dioxide.
