

A turtle is shown from a top-down perspective, swimming. Its shell is replaced by a detailed map of the Earth, showing continents in green and yellow and oceans in blue. The turtle's head and four flippers are visible, with a mottled brown and white pattern. The background is a plain, light gray.

DAY

THE ENDANGERED MARINE ECOSYSTEM

- The marine ecosystem is frightened by the unstoppable process of industrialisation and pollutions.
- As well as air, unfortunately, also the “sea world” was victim of pollution.
- Our biggest resource is in danger.

HOW CAN WE HELP OUR HOUSE ?

- 3 simple rules to follow while visiting the marine biomes.
- 1– No sand collection (it can be very harmful for the beaches).
- 2–No shell should be collected (they are fundamental for sands and little molluscs).
- 3– Nothing should be left on the beachside..

An illustration of Robinson Crusoe on a raft made of logs, wearing a yellow hat and blue pants, fishing with a long pole. The raft has a white sail with a spiral emblem and a teapot on a table. The background shows a blue sky with clouds and a blue sea with a yellow fish and a worm.

THE ROBINSON CRUSOE EXAMPLE:

- As Robinson Crusoe taught us, the sea is a source of food and most importantly the house of billions of living beings.
- The sea gives us resources that are fundamental for life and we should do the same, intensive fishing must not happen.
