

Nature's Bill of Rights

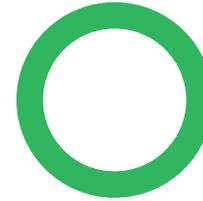

For the International Earth Day
22/04

By Francesco B., Vittorio C., Sofia C.,
Andrea L., Federico L., Laura M.,
Tommaso P., Lucrezia S. from 3°ScA

1. Right to Recognition

1. Every creature on our planet shall be recognized as such, therefore must be granted rights to provide for its safety and well-being.

Our planet is not made by just us, we need to become more aware of the fact that the Earth has a lot of inhabitants who deserve rights as much as we do.

2. Right to Dignity

2. Nature as a whole shall never be taken for granted as something able to survive regardless of the consequences of our actions as mankind, it deserves dignity and respect.

We must acknowledge that our actions have consequences, especially on nature, which means we must be mindful of our decisions as humans.

3. Right to Restoration

3. The Earth is our home and there must be mutual respect between us and the ecosystem, therefore mankind shall restore what it has deprived nature of.

It is mankind's duty to provide for its own planet, so because we took so much away from it we should work hard to ensure the habitat is restored as much as possible.

4. Right to Protection

4. As intelligent beings, we shall entrust mankind with the duty to protect nature from any threat that may arise, including mankind itself, as we have the ability to do so.

The Earth is our home, so we must ensure it is safe at all times and at all cost, otherwise life wouldn't be possible.

5. Right to Freedom

5. Nature has the right to be free from any invasive artificial influence, including pollution, genetic manipulation and large-scale habitat manipulation.

Nature has no right to suffer from mankind's actions, we must work hard to solve our problems without dragging the environment in them.

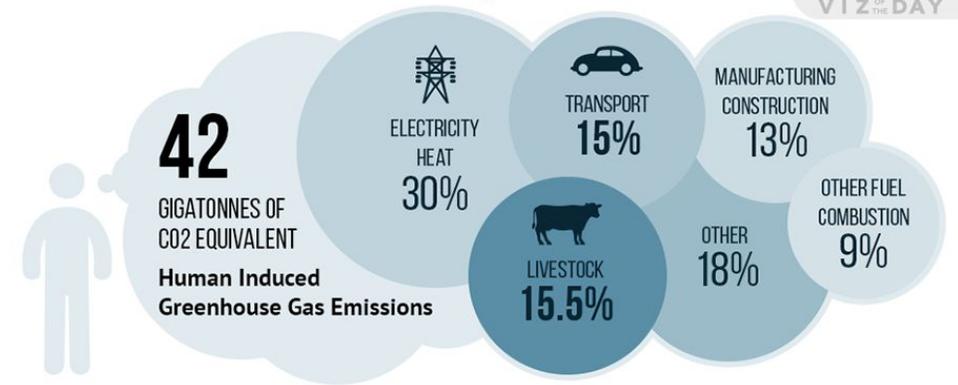

6. Right to not be Abused

6. Every creature has the right to live its life naturally and not be abused by mankind, as every being is born with equal dignity and rights.

Not only does intensive farming produce more CO₂ than transport, it also neglects the rights of every animal involved, which is the main reason why intensive animal farms should be abolished.

7. Right to Biodiversity

7. No creature of any species or breed shall ever be neglected the right to reproduce and live normally on our planet and to give birth to any new species or breed.

Biodiversity is the most important aspect of our planet as it makes it possible for our ecosystem to function properly, so it is an aspect that must be safeguarded.

8. Right to Existence

8. All species among the living creatures have the right to never go extinct, but to coexist on the planet in harmony and peace with the environment.

The disappearance of any kind of species may alter the balance in our environment to a point of no return, therefore we must be sure to never allow any kind of creature to go extinct.

Nature's Bill of Rights

- 1. The Right to Recognition*
- 2. The Right to Dignity*
- 3. The Right to Restoration*
- 4. The Right to Protection*
- 5. The Right to Freedom*
- 6. The Right to not be Abused*
- 7. The Right to Biodiversity*
- 8. The Right to Existence*
